AUTOMATION ENGINEER

AI-focused Automation Engineer experienced in building intelligent workflows, automation pipelines, and AI-integrated systems. Skilled at designing real-time data-driven architectures that integrate APIs, CRMs, and conversational AI tools to reduce manual workload and improve operational efficiency. Passionate about creating pragmatic automation solutions that blend AI, scripting, and process intelligence.

EXPERIENCE

AI Automation Engineer	Fynora Ai	Mar 2025 – Present
- Designed and deployed AI-powered automation pipelines across n8n, Make.com, and Zapier to eliminate manual tasks and connect tools like GoHighLevel, Notion, Slack, and Gmail. - Developed and maintained Voice AI agents using VAPI, integrated with CRM systems to handle lead intake, appointment scheduling, and contextual follow-ups. - Built multi-step AI-driven workflows that processed emails, routed tickets, and generated automated responses with logging, error handling, and retry mechanisms. - Implemented webhook-based event orchestration and error recovery flows to ensure over 99% run reliability in production automations. - Created internal documentation and SOPs enabling non-technical teams to safely create and monitor automations. - Collaborated with operations teams to identify high-ROI automation opportunities and track metrics such as hours saved, latency, and uptime.		
AI Design Engineer	Robionix Technologies	Sep 2023 – Feb 2025
- Built a Safe City AI Traffic Monitoring System using YOLO-trained models and OpenCV for vehicle classification, license plate recognition, helmet detection, traffic violations and e-challan generation. - Developed a software for RFID-Based Marathon Tracker with Computer Vision. Utilized C++ to process data and interact with RFID tag reader, used MySQL database for local storage. - Implemented image classification using edge detection to identify runners' bib numbers. Automated post-race image tagging and categorization through participant ID matching. - Processed live video streams using OpenCV and a trained YOLO model to detect fire in real time, and implemented automated exit guidance for real-time evacuation support. - Designed an Urdu speech-activated smart wheelchair. Used TensorFlow to train a custom CNN model for command classification and PyAudio to process live audio streams. Deployed the system on Raspberry Pi for real-time processing.		
Design Engineer	Orbon Technologies	Jun 2023 – Feb 2024
- Built a UGV with GPS-RTK based localization system, integrating compass-based navigation to achieve accurate path following for autonomous outdoor movement. - Developed Firmware in C++ for efficient sensor data acquisition, using low-latency communication and buffering techniques to support real-time control.		

EDUCATION

Bachelors in Mechatronics Engineering, Air University, Islamabad	2020 – 2024 CGPA: 3.03/4.00
---	--------------------------------

SKILLS

Programming Languages: Python, Javascript(Basic), C, C++, C#, MATLAB
Automation & Integration: n8n, Make.com, Zapier, GoHighLevel (GHL), VAPI, Webhooks, REST APIs, OAuth2
AI & Data Processing: TensorFlow, PyTorch, OpenCV, NumPy, Pandas, IMAP, SMTP, LLM Orchestration
Languages: English (Fluent), Urdu (Fluent)

PROJECTS

Safe City AI Traffic Monitoring System

- Built an AI-based surveillance system using YOLOv5 and OpenCV for real-time vehicle classification and traffic violation detection.
- Integrated license plate recognition, helmet detection, and violation tracking to enhance urban traffic enforcement.
- Automated e-challan generation pipeline for detected infractions, enabling scalable smart city monitoring.

Voice-Controlled Guide and Serve Robot (FYP)

- Developed a chatbot to guide visitors around the university using a speech transcription API.
- Built a phone app using MIT App Inventor to create a responsive UI that processed queries and played responses.
- Designed an automated robotic rail glider mechanism to serve one of three stored beverages.

Real-Time Fire Detection System Using YOLO and OpenCV

- Developed a fire detection system using **YOLOv5** trained on custom fire datasets for real-time identification in video streams.
- Utilized **OpenCV** to process live camera feeds and overlay bounding boxes and confidence scores on detected fire regions.
- Designed for deployment on edge devices (e.g., Raspberry Pi) for remote monitoring in industrial or isolated environments.

C++ Image Manipulation Tool

- Built command-line tools for grayscale conversion, flipping, rotating, and image transformation.

EXTRA-CURRICULAR ACTIVITIES

Team Lead – Robotics and Automation Society (RAAS), AIR University Led the automation of the Student Support Center Building at AIR University, Islamabad.	2023
University Ambassador – Youth Robotech 2023, UET Peshawar Represented Air University and received the Best Ambassador Award among all participating institutions.	2023
Bookme Ambassador – Future Fest Islamabad Selected as a university ambassador to represent Bookme at one of Pakistan’s largest tech festivals.	2023
Participant – National Engineering Robotics Contest (NERC), NUST EME Competed in the national-level robotics challenge showcasing autonomous systems.	2023
Ambassador – Youth Robotech 2024, UET Peshawar Engaged in inter-university robotics competition demonstrating embedded and automation skills.	2024
