SUMMARY

Voice AI engineer who has shipped production voice agents used by real callers across live client deployments. Hands-on with the real-time STT → LLM → TTS voice loop: telephony setup on Twilio and SIP trunking, conditional call routing and human transfers, and systematic tuning of speech providers (Deepgram) for the latency-versus-quality tradeoff. Mechatronics background — built for reliability first, with monitoring, retry handling, and failure recovery designed in from the start, and focused on making AI phone calls feel natural, fast, and dependable in production.

EXPERIENCE

Voice AI Engineer | Fynora AI

Mar 2025 – Present

- Shipped production voice agents used by real callers across multiple live client deployments (healthcare clinics, insurance, med spas), owning the agent behavior end-to-end: conversation flow, turn-taking, interruption handling, tool calls, and human handoff.
- **Configured telephony and SIP trunking** for live call handling — including conditional call routing that rings a desk phone first and, if unanswered, fails over to the AI agent, plus rule-based transfers back to a human when needed.
- **Tuned the speech pipeline for latency and quality:** evaluated and optimized Deepgram STT settings (model, endpointing, sensitivity) and voice-provider configuration to land on the best quality/speed tradeoff for live call conditions, tested against real call recordings.
- **Improved turn-taking and interruption behavior** — endpointing, silence handling, and barge-in — refining against real call recordings to reduce the agent talking over callers or cutting them off, so calls feel natural.
- Deployed an AI voice + follow-up system for a clinic's new-location launch that **booked 42 appointments in the first 36 hours and handled 500+ leads in under two weeks**, with ~75% of conversions driven by automated follow-up and zero manual lead handling.
- Wrote production-grade voice agent prompts covering business logic, personas, edge cases, and fallbacks, replicating each client's real qualification, booking, and escalation logic so the agent behaves like their best employee.
- Built post-call data pipelines so summaries, outcomes, recordings, and contact updates land automatically in the correct CRM records via webhooks and REST APIs.
- **Kept voice deployments reliable in production** through webhook orchestration, logging, monitoring, retry handling, and failure recovery — proactively flagging and debugging live call issues.

AI Design Engineer | Robionix Technologies

Sep 2023 – Feb 2025

- **Built an Urdu speech-activated smart wheelchair** using TensorFlow and PyAudio for real-time voice-command classification on Raspberry Pi — handling live audio capture, buffering, and low-latency on-device inference.
- Built a Safe City AI traffic-monitoring system (YOLO, OpenCV) for vehicle classification, license-plate recognition, and automated e-challan generation from live video streams; also developed an RFID-based marathon tracking system (C++, MySQL).

Design Engineer | Orbon Technologies

Jun 2023 – Feb 2024

- Built a UGV with GPS-RTK localization and compass-assisted navigation; wrote C++ firmware for **real-time, low-latency sensor data acquisition and buffering** in autonomous control systems.

SKILLS

Voice & Telephony: VAPI, Retell AI, Deepgram (STT tuning), Twilio, SIP trunking, call routing & failover, warm/human transfers, endpointing, barge-in & interruption handling, turn-taking, voice agent prompt engineering, post-call data pipelines

Speech & AI: Real-time STT → LLM → TTS pipelines, LLM orchestration, structured outputs (JSON), function/tool calling, provider evaluation & tuning, TensorFlow, PyTorch, PyAudio, OpenCV

Integration & Reliability: Webhooks, REST APIs, OAuth2, GoHighLevel, n8n, Make, Zapier, HubSpot/Zoho/Pipedrive, logging, monitoring, retry handling, failure recovery

Programming: Python, JavaScript, Node.js, C, C++, C#, MATLAB

Languages: English (fluent, written & spoken), Urdu (fluent)

SELECTED PROJECTS

Production Voice Agent Pipeline (VAPI + Deepgram + Telephony) — end-to-end voice agent connecting telephony, Deepgram STT, LLM orchestration, TTS, and CRM/calendar systems via webhooks and REST APIs, with call routing, transfers, retry handling, and automated post-call pipelines.

EDUCATION

B.E. Mechatronics Engineering | Air University, Islamabad

2020 – 2024

Leadership: Team Lead, Robotics & Automation Society (Air University) • University Ambassador, Youth Robotech 2023 & 2024 • Participant, NERC (NUST EME)
